The MyStitchBook Champion Guide

How to turn every tailor who signs up into a marketer, and every post into a system

Built for: MyStitchBook (launched — day one) **Adapted from:** The Creator Business Live Masterclass (Story Leverage System, Content-to-Profit Framework, Story-Selling Formula) **Voice:** Brand entity (“we/MyStitchBook”), never personal “I” **North Star:** 1,000 active users by December — 60% acquisition-weighted, 40% audience-building

How to use this guide

This is not a document to read once and file away. It is a system. Every section ends with something you can post, send, or build this week. Read it once fully, then keep it open as a working reference — pull from it every time you sit down to create content.

The core idea behind everything in here: **nobody wakes up caring about MyStitchBook**. They care about their own frustration — the customer who won’t stop calling to ask “where’s my cloth,” the order that slipped through the cracks, the reputation they’re quietly trying to protect. Every story, post, and offer below is built to meet tailors and their customers exactly there, not to talk about features first.

PART 1: THE FOUNDATION —

MyStitchBook's Story

A story is not a bio. Functionally, a story has to do three things: **gain attention** (break a pattern), **gain trust** (make the listener feel understood), and **drive action**. Everything else in this guide sits on top of this section.

1.1 The Origin Story (brand voice, ready to use)

Use this as your “About,” your first pinned post, your pitch opener, and the seed for a launch-week video.

Long version: *Every good story starts with a little bit of trouble. Ours starts with a shirt.*

Someone on our team went to a tailor to get something made. Nothing fancy — just a simple order, with a simple deadline. Days passed. Then a week. No update, no message, nothing. So we asked. “Sorry o, it’s coming,” the tailor said. Then more silence.

The deadline came. It passed. It stretched again. Still nothing. When the piece was finally ready, it wasn’t quite right — and by then, the trust was gone too. We didn’t go back.

A month later, we ran into the same tailor by chance. There was an apology, and an explanation: the power had been out for days on end, orders had piled up, and there simply hadn’t been time to keep everyone updated. We decided to give it one more try. We placed a new order.

And the exact same thing happened again.

But this time, something clicked. This wasn’t a bad tailor. This was a good tailor with too much to carry and nowhere to put it down — every order, every promise, every measurement, all living in one overworked memory instead of somewhere safe. The silence wasn’t rudeness. It was a system missing.

We told this story to the rest of our team, expecting a laugh of sympathy. Instead, everyone had their own version of it — some as the customer left wondering, some as the tailor drowning quietly and doing their best anyway. That’s when we realized: this wasn’t one bad day at one shop. This was happening everywhere, to almost everyone, on both sides of the counter.

So we built MyStitchBook — a simple place for tailors to keep every order, every customer, and every promise in one spot they can actually see. Not because tailors need to be told how to sew. Because everyone, on both sides, deserves to stop wondering.

Short version (for bios, captions, pitch decks):

MyStitchBook began with a simple tailoring order that went quiet for weeks — not because the tailor didn’t care, but because there was no system to keep track of it all. We built

the tool we wished had existed: one place for tailors to manage every order and every customer, so nobody has to wonder, and nobody has to carry it all alone.

Where to use it: Instagram bio link page / “About,” first pinned reel, founder-story carousel, pitch materials, onboarding email to new sign-ups.

1.2 The Story Formula (for every future post)

Struggle (Before) → Moment (what shifted) → After (what we built) → Benefit (why it matters to them)

Keep this four-part shape for any new story you tell — a tailor testimonial, a feature launch, a team story. It’s the shape, not just this one story, that does the work.

PART 2: THE FIVE NON-NEGOTIABLE STORIES

Every brand needs these five story types in rotation. Miss any one of them and part of your trust-building machinery is missing.

1. Origin Story ✓

Covered above. Rotate the long and short versions; occasionally tell it from the tailor's side instead of the customer's side, for variety.

2. Enemy Story

MyStitchBook is against: the *silent order* — the gap where a tailor knows what's happening but the customer doesn't, and the tailor knows they're behind but has no system to catch it before it becomes a crisis.

Sample line: *"We are not against tailors. We're against the notebook that gets lost, the WhatsApp thread with 40 unread messages, and the customer who has called four times this week just to ask 'is it ready.' That's the enemy. Not the tailor — the chaos around them."*

Use this to explain price increases, feature launches, and even to gently needle competitors who position themselves as "just another business tool" instead of naming the real enemy.

3. Proof Story

Right now you don't have paid testimonials — so **MyStitchBook has to be its own first proof**. Document the build. Document your own team using the product for its own internal processes if applicable. Document early users' *actual* usage (with permission) even before they're vocal about results — a screen recording of a tailor's public tracking page in action, showing a real update flowing through, is proof even without a quote attached.

The moment your first unpaid users convert to daily users, capture: - A screenshot of their dashboard mid-use (with permission, blurred sensitive info) - A short quote, even informal ("this WhatsApp message thing has saved me so much back and forth") - Their public portfolio link going live — that itself is shareable proof

4. Belief / Contrarian Story

MyStitchBook's stated belief: *Tailors don't lose customers because they're bad at sewing. They lose customers because nobody told them what stage their garment was at.* This is your differentiator against every competitor who pitches "manage your tailoring business" as a generic productivity pitch. You're not selling organization for its own sake — you're selling the end of the awkward "is it ready?" phone call, for both sides.

5. Vision Story

Where is MyStitchBook going? Something like: *“We believe every tailor in Nigeria — from the one-person shop on the corner to the multi-branch studio — deserves to run their business like the serious, skilled professional they already are. Not with a notebook. With a system that makes their customers trust them before they’ve even met.”* Use this sparingly — quarterly, or at milestones (first 100 users, first 1,000 users) — because vision content rallies people, but only works when it doesn’t overplay.

PART 3: KNOW YOUR TWO AUDIENCES

MyStitchBook is unusual in that it serves two audiences directly and both are useful in content: **the tailor** (paying user) and **the tailor's customer** (indirect user, and a source of viral distribution via the public tracking/portfolio pages).

Customer Universe & Dramatic Need — The Tailor

State that triggers them to look for MyStitchBook: They're juggling multiple customers' orders in their head or a notebook. A customer just called (again) asking for an update, and they don't have a clean answer. They've just lost — or nearly lost — a customer to a rival tailor because communication broke down.

Dramatic need (what's underneath): It's not really "I need an app." It's *"I need to stop feeling unprofessional."* It's the fear of being seen as "just a roadside tailor" instead of a serious business. It's wanting referrals and reputation to grow instead of quietly leaking customers. And there's a subtler one too — the mental exhaustion of being *checked up on* constantly by anxious customers; MyStitchBook's tracking page isn't just for the customer's peace of mind, it's relief for the tailor from being interrupted all day.

Customer Universe & Dramatic Need — The Tailor's Customer

State that triggers them: They've just dropped off an important piece — wedding outfit, event dress, a first order with a new tailor — and the silence has started.

Dramatic need: Anxiety, not curiosity. *"Will this turn out how I imagined?" "Have they forgotten about me?" "Can I actually trust this person with something that matters?"* The fear isn't really about fabric — it's about being forgotten, and about the embarrassment of showing up to an event in the wrong outfit or no outfit at all.

The Enemy (shared by both)

Not the tailor. Not the customer. **The communication gap** — the space where good intentions on both sides get lost because there's no shared, visible system holding them together.

Positioning Statement

"We help tailors who are drowning in orders, measurements, and anxious customer check-ins run their shop like the serious business it is — without needing to hire an assistant or remember everything themselves."

A parallel line for the customer side: *"We help you know exactly where your outfit is — without ever having to ask."*

PART 4: THE CONTENT-TO-PROFIT FRAMEWORK

Four goals. Each goal has four content types. The fourth type in each goal is the one that historically gets 80% of results — prioritize it, but don't skip the first three.

GOAL 1: ATTRACTION

Purpose: stop the scroll. Break the pattern.

1. **Educational content** — “If your tailor has ever gone quiet on you for a week, this is why (and it's not what you think).” Visual, myth-busting, specific.
2. **Transformational content** — Before/after of a tailor's workflow: notebook chaos vs. the MyStitchBook production board. Or before/after of a customer's anxiety: “calling 4 times a week” vs. “checked the link once.”
3. **Relatable/inspirational stories** — Repost (with permission) a tailor's own story of almost losing a client to bad communication, and how they fixed it.
4. **Magnet/broad content (80% driver)** — Speak to the *underlying* desire, not the surface one. For tailors, that's not “get organized” — it's **dignity and being taken seriously as a business owner**. For customers, it's not “track an order” — it's **the relief of not having to wonder**. Content example: “POV: your tailor finally has their life together and you get a WhatsApp update before you even have to ask.”

GOAL 2: CONNECTION

Purpose: move from audience to community.

1. **Personal/brand stories** — Team stories, the origin story retold from different angles, “a day in the life of building MyStitchBook.”
2. **Series content** — Run a public series: “*The Journey to 1,000 Tailors*” — document sign-up milestones, first paying customers, first testimonial, in real time. This turns your growth itself into content, and gives people a reason to follow along and watch you hit December.
3. **Q&A** — Open a weekly “Ask MyStitchBook” slot — tailor questions about the app, or general business/communication questions from your audience.
4. **Values content (80% driver)** — Show what MyStitchBook stands for beyond the product: respect for the tailoring trade, belief that Nigerian tailors are underestimated, frustration with “invisible labor” going unrecognized. This is where the brand feels human even without a single named face attached to it.

GOAL 3: AUTHORITY

Purpose: become the trusted expert.

1. **Technical/insider content** — “3 things every customer should ask before dropping off fabric with a new tailor” or “Why your tailor might be quiet for days (it's probably not what you assume).”

2. **Reviews/opinions** — Reaction content to fashion events (AMVCA, Lagos Fashion Week, etc.) from a “here’s what good tailoring communication and craftsmanship look like” angle.
3. **Comparison content** — “We asked 20 tailors why they still use a notebook instead of an app” — then break down what a system actually solves.
4. **Case studies/breakdowns (80% driver)** — Once you have real users: full breakdowns of a tailor’s before/after — order volume, time saved, customer satisfaction. This is your strongest long-term authority content once testimonials exist. Start structuring these now so you can fill them in as data arrives.

GOAL 4: CONVERSION

Purpose: it must sell.

1. **Testimonial content** — Be your own first testimonial until real ones arrive (see Proof Story above).
 2. **Urgency/limited content** — Early-access framing: “*First 100 shops get lifetime free access to [future premium feature].*”
 3. **Product Q&A** — Directly answer “how much does it cost,” “does it work for a one-person shop,” “what if I’m not techy.”
 4. **Story-selling (80% driver)** — This is the combination format below, in Part 5. It is the single highest-leverage content type you have.
-

PART 5: THE STORY-SELLING FORMULA

Storytelling shifts you from *pushing* (pitching MyStitchBook at people) to *pulling* (positioning so tailors come looking for it). It runs on a Problem → Benefit structure built from four parts, already mapped for you in Part 3 above:

1. **Customer Universe** — the state that triggers the search (drowning in orders / anxious about a garment)
2. **Dramatic Need** — the deeper desire (dignity, relief, trust)
3. **Enemy** — the communication gap
4. **Role** — what MyStitchBook actually does about it

A ready-to-use story-selling post:

A tailor doesn't lose a customer because the stitching was bad. They lose them because the customer called three times and got no answer.

That customer didn't find a new tailor because the last one lacked talent — they found one who tells them what's happening.

MyStitchBook exists so the first tailor never has to be that story again. One link. One dashboard. Every customer knows exactly where their garment is — without a single phone call.

[Link in bio]

PART 6: THE OFFER LADDER

Currently: **Free tier** (15 orders/month cap) and **Premium** (¥2,500/month). Below is the full three-tier structure to build toward, per the offer-stack framework.

Lead Magnet (free, draws people in)

A “**Communication Health Check**” — a short quiz/tool (can build with Claude): *“Is your tailoring business losing customers to silence? Answer 5 questions and find out.”* Result: a score + a direct nudge toward signing up for the Free tier. This gives you something naturally shareable and low-friction, distinct from the app sign-up itself.

Tier 1 — DIY (existing: Free + Premium ¥2,500/month)

This is already built. Position Premium not as “more features” but as “**stop losing customers to silence**” — tie every upgrade prompt back to the enemy story, not a feature list.

Tier 2 — Done-with-them (to design)

A **guided onboarding package** for shop owners who are less tech-comfortable: a one-time setup fee where your team helps import their existing customer list, sets up their portfolio page, and trains them (voice note/video call) on the WhatsApp update flow. Priced modestly (e.g., ¥5,000-¥10,000 one-time) — this converts your “willing but overwhelmed” segment who would otherwise churn during setup.

Tier 3 — Done-for-them (to design)

For **multi-branch or established shops**: a premium, higher-touch tier once Multi-Branch Management ships — includes priority support, custom portfolio branding, and a dedicated check-in call monthly. This is your highest-ticket offer and doesn’t need to exist publicly yet, but should be flagged as “coming soon” to your most engaged shop-owner users to gauge demand.

The \$10,000-in-a-week exercise, applied

At ¥2,500/month, hitting meaningful revenue requires *volume*, not one-by-one conversion. Two moves matter more than individual outreach: 1. **Partnerships** — tailoring associations, fabric/material suppliers, event planners (wedding/asoebi vendors) who already have bulk access to tailors. Offer a referral cut or co-branded push. 2. **The built-in viral loop** — every tailor’s public portfolio and tracking page carries the MyStitchBook name. Make this loop *louder*: consider a small incentive (e.g., one free month) for tailors whose portfolio page drives a new sign-up, trackable via referral link.

PART 7: THE CONTENT ENGINE (how you'll actually execute this)

Tools (budget-real): - **Claude Design** — commercial demo video, infographics, carousel concepts (your confirmed tool) - **CapCut** (free) — editing, captions, faceless voiceover-style content - **Canva Free** — carousel polish/export if needed - **Meta Business Suite** (free) — scheduling for Instagram/Facebook - **Google Sheets** — a simple content bank: one row per story (Origin/Enemy/Proof/Belief/Vision), which content goal it serves, and which format it's been turned into, so nothing gets reused stale or wasted

One story → many formats (avoid burnout): Every time you write one solid story (like the origin story or a new tailor testimonial), break it into: 1 reel/video script, 1 carousel, 2-3 single-image quote posts, 1 longer caption-only post, 1 WhatsApp-status-style short clip. Use Claude to generate all five formats from one source story in a single session — this is your version of their “13-in-1 content engine.”

Faceless-first approach: Since HeyGen isn't in budget yet, lean on: text-over-footage of the app in use (screen recordings of the dashboard, portfolio pages, WhatsApp updates), voiceover narration (any team member, brand voice, not personal), and carousel/infographic formats from Claude Design. This is not a downgrade — case-study and educational content performs well faceless, especially in the Authority and Attraction goals.

PART 8: 90-DAY PLAN TOWARD 1,000 USERS BY DECEMBER

Weeks 1-2 — Foundation - Publish origin story (long + short versions) across all bios and a launch post - Set up Google Sheets content bank - Launch lead magnet (“Communication Health Check”) - Post cadence: 4-5x/week, weighted toward Attraction + Connection content (you have zero followers — attention first)

Weeks 3-6 — Proof-building - Start the “Journey to 1,000 Tailors” series (Connection goal) - Reach out directly to your current unpaid users for permission to feature their usage — even informal screenshots/quotes count as early Proof content - Begin outreach to 2-3 tailoring associations or fabric suppliers for partnership conversations (offer ladder, Tier 2/3 seeding)

Weeks 7-10 — Authority + Conversion ramp - First case-study breakdown once any user has a full order cycle completed in-app - Increase Conversion-goal content (story-selling posts, testimonial content, urgency framing around early-access perks) - Push referral-loop incentive live (free month for portfolio-driven sign-ups)

Weeks 11-13 (into December) — Push to 1,000 - Weekly public countdown as part of the series content (“500 tailors. 4 weeks to go.”) - Partnership pushes should be converting by now — lean harder into bulk-acquisition channels over individual outreach, per the masterclass’s core lesson on scaling beyond one-by-one conversion

Quick-Reference Swipe File

Bio line: *Helping tailors run their shop with zero guesswork — for them, and their customers.*

WhatsApp reach-out template (for tailors to use with their own customers, doubles as your own outreach model): *“Hi {name}! Just letting you know your [garment] has moved to [stage]. You can check progress and photos anytime here: [tracking link].”*

DM opener to a prospective tailor user: *“Hey! Saw your work — beautiful. Quick question: how do you currently keep track of which customer is on which stage of their order? We built something that might save you a lot of back-and-forth.”*

Post caption starter bank: - *“Your tailor isn’t ignoring you. She’s drowning. Here’s the difference between the two —”* - *“We built MyStitchBook after an order went quiet for weeks — turns out, it wasn’t anyone’s fault —”* - *“POV: you finally know where your outfit is without asking —”* - *“The real reason tailors lose repeat customers (it’s not their stitching) —”*

This guide is a living document. Update Part 6 (Offers) as Tier 2/3 get built, and Part 2 (Proof Story) the moment real testimonials start coming in — that single addition will do more for Conversion-goal content than anything else in here.
